ALVAR 14

Hot work tool steel

This information is based on our present state of knowledge and is intended to provide general notes on our products and their uses. It should not therefore be construed as a warranty of specific properties of the products described or a warranty for fitness for a particular purpose.
General

Alvar 14 is a chromium-nickel-molybdenum-vanadium alloyed steel which is characterized by:

- Good toughness
- Good resistance to high thermal stresses
- Good stability in hardening
- Good through-hardening properties.

Applications

Alvar 14 is ideally suited for hot working tools such as:

- Support parts for extrusion tooling, e.g. backers, bolster
- Hot forging tools
- Die for tin, lead and zinc alloys
- Tools for hot shearing.

Heat treatment

SOFT ANNEALING

Protect the steel and heat through to 700°C (1290°F). Then cool in the furnace at 10°C (20°F) per hour to 650°C (1200°F), then freely in air.

STRESS RELIEVING

After rough machining the tool should be heated through to 650°C (1200°F), holding time 2 hours. Cool slowly to 500°C (930°F), then freely in air.

HARDENING

Pre-heating temperature: 600–700°C (1110–1290°F).

<table>
<thead>
<tr>
<th>Temperature °C</th>
<th>Soaking time* minutes</th>
<th>Hardness before tempering</th>
</tr>
</thead>
<tbody>
<tr>
<td>850</td>
<td>1560</td>
<td>approx. 58 HRC (O)</td>
</tr>
<tr>
<td>880</td>
<td>1620</td>
<td>approx. 56 HRC (A)</td>
</tr>
</tbody>
</table>

* Soaking time = time at hardening temperature after the tool is fully heated through.

Protect the part against decarburization and oxidation during hardening.

QUENCHING MEDIA

- Air blast/vacuum
- Martempering bath. Temperature 250°C (480°F) for max. 15 minutes, then cooling in air
- Warm oil.

Note: Temper the tool as soon as its temperature reaches 50–70°C (120–160°F).

TEMPERING

Choose the tempering temperature according to the hardness required by reference to the tempering graph. Temper twice with intermediate cooling to room temperature. Lowest tempering temperature 180°C (360°F). Holding time at temperature minimum 2 hours.

Properties

PHYSICAL DATA

Hardened and tempered to hardness 40 HRC. Data at room and elevated temperatures.

Standard specification

W.-Nr. 1.2714, DIN 56 NiCrMoV7

Delivery condition

1. Soft annealed to max. 250 HB.
2. Hardened and tempered to 330–400 HB (36–43 HRC; 1100–1350 N/mm²).

Colour code

White/black
NITRIDING
Nitriding will give a hard surface layer which is very resistant to wear and erosion.

Machining recommendations
The cutting data below are to be considered as guiding values which must be adapted to existing local conditions. More information can be found in the Uddeholm publication "Cutting data recommendation".

Condition: Soft annealed to max. 250 HB

TURNING

MILLING

<td>A 60 KV</td>
</tr>
<tr>
<td>Internal grinding</td>
<td>A 46 JV</td>
</tr>
<tr>
<td>Profile grinding</td>
<td>A 100 KV</td>
</tr>
</tbody>
</table>

1) For coated HSS end mill \(v_c = 20–25\) m/min. (66–82 f.p.m.).
2) Depending on radial depth of cut and cutter diameter.
Electrical-discharge machining

If spark-erosion is performed in the hardened and tempered condition, the white re-cast layer should be removed mechanically e.g. by grinding or ston- ing. The tool should then be given an additional temper at approx. 25°C (50°F) below the previous tempering temperature.

More information is given in the Uddeholm brochure “EDM of Tool Steel”.

Welding

Welding of tool steel can be performed with good results if proper precautions are taken regarding elevated temperature, joint preparation, choice of consumables and welding procedure.

<table>
<thead>
<tr>
<th>Welding method</th>
<th>TIG</th>
<th>MMA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Filler metals</td>
<td>UTPA 73G4 ESAB 83.28</td>
<td>UTP 73G4 ESAB 83.28</td>
</tr>
<tr>
<td>Hardness after welding</td>
<td>350–400 HB</td>
<td>340–390 HB</td>
</tr>
</tbody>
</table>

More detailed information can be found in the Uddeholm brochure "Welding of Tool Steel".

Further information

Please contact your local Uddeholm office for further information on the selection, heat treatment, application and availability of Uddeholm tool steels.
we can be trusted. Meet us under the Uddeholm and ASSAB brands, As the world's leading supplier of tooling materials and related services, the process to the release of the new product, we'll be your partner. When the first idea pops into your head, throughout the development process.
